What is a 26650 battery?

At BatteryJunction, we pride ourselves on our everyday low price and diverse range of products. The 26650 battery is a li-ion rechargeable cell that features high-capacity energy storage, ideal for high-performance flashlights. Shop trustworthy brands at low prices.

Are 26650 batteries safe?

Available as both protected and unprotected, 26650 batteries are the perfect companion for high drain devices and are produced by some of the most trusted lithium-ion battery companies. We also carry a variety of battery chargers compatible with 26650 batteries.

What is the nominal voltage of a 26650 battery?

Maximum 26650 batteries have a nominal voltage round 3.7V, but this will range barely relying on the battery's chemistry. Talking of chemistry, 26650 batteries are available in diverse kinds, inclusive of Lithium Iron Phosphate (LiFePO<sub>4</sub>) and Lithium Manganese Oxide (LiMn<sub>2</sub>O<sub>4</sub>), every presenting extraordinary benefits.

How many Mah can a 26650 battery hold?

Some torches have opted to support 26650 cells, as they have the same length as 18650 cells, just with a greater diameter. These cells can reach up to around 6000mAh at the extreme top end, with capacities of 5500mAh being

more readily available as compared with the 18650s which top out at 3600mAh and usually are seen at 3400mAh and below.

Should I buy a 26650 or a ft03?

Having recently acquired an Astrolux FT03 which supports all three sizes mentioned, I decided to settle on the 26650, deciding that capacity was more important than peak current. After all, we all know what happens to a torch running on turbo – it steps down in literally a matter of minutes, sometimes less.
