

# 40 kWh energy storage battery project

#### **Overview**

What is a 40kWh energy storage battery system?

A 40kWh energy storage battery system is an all-in-one solution that combines 40kWh of LiFePO4 lithium batteries with an 8kW hybrid inverter. This system offers advantages such as large capacity, high power, small self-discharge, and good temperature resistance.

What is a 40 kWh battery?

Let's say for your car the battery is 40 kWh. What does this mean?

It means the battery inside your electric car can store a maximum of 40 units, or kWh, of electricity. In other words, kWh for an electric vehicle is a measure of how much electricity can be stored inside the battery.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Does battery storage cost reduce over time?

The projections are developed from an analysis of recent publications that include utility-scale storage costs. The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time.

What is a good round-trip efficiency for battery storage?

The round-trip efficiency is chosen to be 85%, which is well aligned with published values. Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities.

When will battery cost projections be updated?

In 2019, battery cost projections were updated based on publications that focused on utility-scale battery systems (Cole and Frazier 2019), with updates published in 2020 (Cole and Frazier 2020) and 2021 (Cole, Frazier, and Augustine 2021). There was no update published in 2022.
