

5g base station power consumption analysis

Overview

Does a 5G base station have a power consumption model?

This paper proposes two modified power consumption models that would accurately depict the power consumption for a 5G base station in a standalone network and a novel routing protocol for distributing the load on the base stations in the case of intercellular communication.

Should power consumption models be used in 5G networks?

This restricts the potential use of the power models, as their validity and accuracy remain unclear. Future work includes the further development of the power consumption models to form a unified evaluation framework that enables the quantification and optimization of energy consumption and energy efficiency of 5G networks.

How can we improve the energy efficiency of 5G networks?

To improve the energy efficiency of 5G networks, it is imperative to develop sophisticated models that accurately reflect the influence of base station (BS) attributes and operational conditions on energy usage.

Are 5G radio access networks energy-efficient?

Various 5G enabled scenarios, such as, the impact of traffic load variations, the number of antennas of HPN, variation in bandwidth, and density of LPNs in mm-wave communication is considered to investigate the power requirements and network power efficiency of these radio access architectures to propose the energy-efficient radio access network.

Is there a power consumption model for realistic 5G AAUs?

s.VI. CONCLUSIONS In this paper, we presented a novel power consumption model for realistic 5G AAUs, which builds on large data collection campaign. At first, we proposed an ANN architecture, which allows modelling mu.

Is 5G consuming more energy?

The energy consumption of the 5G network is driving attention and many world-leading network operators have launched alerts about the increased power consumption of the 5G mobile infrastructure . The access network is a most energy-intensive component (i.e., 60%–80%) than the other components of the mobile network.
