

## 5g energy storage new energy

#### **Overview**

#### Is 5G a greener technology?

5G is a natively greener technology with more data bits per kilowatt of energy than any previous wireless technology generation. However, the rollout of 5G networks is also set to increase traffic dramatically making it critical that the energy consumed does not rise at the same rate.

How much energy does 5G carry?

Electromagnetic waves in the frequencies used by 5G between 3.5 and 24 GHz carry 10-5 to 10-4 electron volts (eV) of energy (0.00001eV to 0.0001eV). These energy values are at least 100,000 to 1,000,000 times less energy than that of typical electron bonds in human biology – 1 eV to 10 eV.

What is 5G & how does it work?

Like 4G and 3G before it, the G stands for "generation" – so 5G is the 5th generation of mobile network technology. The technology itself is a faster way of transmitting data from mobile towers to your phone, car or whatever 5G device you have.

#### 5g energy storage new energy

#### <u>Energy-Smart 5G Site: Sustainable</u> Network Solution

Case study: Ericsson Energy-Smart 5G Site With increasing data traffic, network energy consumption and cost, Ericsson's Energy-Smart 5G Site establishes a new model for cell ...
