

Argentina Power Generation Energy Storage Frequency Regulation Project

Overview

The electricity sector in constitutes the third largest power market in Latin America. It relies mostly on thermal generation (60% of installed capacity) and hydropower generation (36%). The prevailing natural gas-fired thermal generation is at risk due to the uncertainty about future gas supply. Faced with rising electricity demand (over 6% annually) and declining reserve margins, the gov.

Will Argentina integrate new electricity storage infrastructure into urban distribution networks?

This national and international open call, part of Resolution SE 67/2025, marks Argentina's first large-scale effort to integrate new electricity storage infrastructure into urban distribution networks.

What was the electricity sector like in Argentina before 1991?

Prior to 1991, the electricity sector in Argentina was vertically integrated. The new legal framework for the electricity sector included: vertical and horizontal unbundling of generation, transmission and distribution; opening up of all segments to the private sector; and separation of the regulatory function from policy setting.

What is Argentina's energy sector regulatory framework?

Argentina's energy sector regulatory framework aims to provide more market certainty and attract foreign investment to enhance oil and natural gas production for exports. Given the current economic challenges, Argentina's federal and provincial governments continue to have a significant role in the energy sector.

Can battery energy storage modernize Argentina's grid?

Argentina's ambitious push toward grid modernization through battery energy storage has received an enthusiastic response, with CAMMESA (Compañía Administradora del Mercado Mayorista Eléctrico) confirming the submission of 27 project proposals from 15 companies under its AlmaGBA program.

What is the potential of power system transformation in Argentina?

Achieving power system transformation Argentina has large potential to increase a the participation of renewables its electricity in generation mix and drive the decarbonisation of the economy.

How much electricity does Argentina import?

In 2005, Argentina imported 6.38 TW·h of electricity while it exported 3.49 TW·h. Net energy imports thus were about 3% of consumption. Argentina also imports electricity from Paraguay, produced by the jointly built Yaciretá Dam.
