

### **Armenia Solar Configuration**

#### **Overview**

Armenia's area cannot be considered as homogeneous from the perspective of available solar energy: the difference between the amount of solar energy reaching the ground in different places in the country can be up to 20% in the summer, and 50% in the winter.

is widely available in due to its geographical position and is considered a developing industry. In 2022 less than 2% of was generated by .The use of solar.

As of April 2019 ten 1 MW strong solar stations are installed. Solar and wind stations account for less than 1% of total installed electricity generation capacities. In April 2019 it was.

• • • • • .

According to the , Armenia has an average of about 1720 .

In Armenia, , or water-heaters, are produced in standard sizes (1.38-4.12 square meters). Solar water-heaters can be used for space heating, solar.

• • •

Armenia's geography provides an ideal setting for solar power generation, with over 2,500 hours of sunshine annually. Recognizing this potential, the government introduced policies and subsidies to encourage the construction of solar farms and the adoption of rooftop solar systems.
