

Armenia Wind Power Energy Storage Station

Overview

generates less than 1% of annually, as there were only four wind farms in 2023 and less than 10 MW is installed. According to a study sponsored by the (DOE) and the (USAID) in 2002–2003, the theoretical potential of Armenia is 4,900 MWe in four zones with a total area of 979 km. According to this r.

How much wind power does Armenia have?

A 2003 study by the U.S. Department of Energy's National Renewable Energy Laboratory (NREL) estimated Armenia's land areas with "good-to-excellent" wind resource potential to be around 1,000 km². With a conservative assumption of 5 MW per km², the authors noted that the area could support almost 5,000 MW of potential installed capacity.

How many wind farms are there in Armenia?

Armenia's wind energy sector is minuscule. The entire country has just four wind farms with an installed capacity of 4.23 MW and an average annual generation of 3.97 GWh.

How big is Armenia's solar power?

In 2017, Tamara Babayan, a sustainable energy expert, estimated the potential of Armenia's distributed solar power at 1,280 MW and almost 1,800 GWh in annual generation.

How much electricity does Armenia produce a year?

Last year Armenia produced 8,907.9 GWh of electricity, up 16% from 2021. The vast majority came from thermal power plants in Yerevan and Hrazdan (43.5%) and the Metsamor Nuclear Power Plant (32%). Hydropower accounted for 21.8%, while solar stood at 2.7% and wind power at just 0.02%.

Where does Armenia's electricity come from?

Despite this progress, the majority of Armenia's electricity still comes from non-renewable sources. Last year Armenia produced 8,907.9 GWh of electricity, up 16% from 2021. The vast majority came from thermal power

plants in Yerevan and Hrazdan (43.5%) and the Metsamor Nuclear Power Plant (32%).

How many hydropower plants are there in Armenia?

Hydropower is Armenia's largest renewable electricity source. It is composed of two large cascades on the Hrazdan and Vorotan rivers and 188 small hydropower plants (HPPs) spread around the country. The small HPPs have an overall capacity of 389.3 MW and average annual electricity generation of 909 gigawatt hours (GWh).
