

# **Asia Hybrid Compression Energy Storage Project**

#### **Overview**

Will China accelerate the development of compressed air energy storage projects?

Now, China is expected to accelerate the development of its far less prevalent compressed air energy storage (CAES) projects to optimize its power grid performance and move in a greener direction.

Are hybrid compressed air energy storage systems feasible in large-scale applications?

6.1. Technical performance of the hybrid compressed air energy storage systems The summarized findings of the survey show that the typical CAES systems are technically feasible in large-scale applications due to their high energy capacity, high power rating, long lifetime, competitiveness, and affordability.

What is a compressed air energy storage project?

A compressed air energy storage (CAES) project in Hubei, China, has come online, with 300MW/1,500MWh of capacity. The 5-hour duration project, called Hubei Yingchang, was built in two years with a total investment of CNY1.95 billion (US\$270 million) and uses abandoned salt mines in the Yingcheng area of Hubei, China's sixth-most populous province.

What is compressed air energy storage (CAES)?

Among different energy storage options, compressed air energy storage (CAES) is a concept for thermo-mechanical energy storage with the potential to offer large-scale, and sustainable operation.

How long can a compressed air energy storage plant store electricity?

CEEC claims that the facility can store electricity for eight hours and release power over a five-hour period on a daily basis. The world's first 300-MW compressed air energy storage (CAES) demonstration plant has been

connected to the grid, operating at full capacity in the central Chinese province of Hubei.

What are the integration potentials of hybrid renewable powered CAES systems?

Table 2. Summary of integration potentials and retrofitting improvement strategies of hybrid renewable powered CAES systems. -CAES can store excess solar energy for later use- System can provide both electricity and heat. 4.1. CAES with high solar thermal energy storage

## **Asia Hybrid Compression Energy Storage Project**
