

Attic outdoor solar integrated machine

Overview

What is a solar attic fan?

A solar attic fan is a roof-mounted ventilation fan powered entirely by the sun. It actively pulls hot air out of your attic, reducing heat buildup and moisture using free solar energy (no wiring or electricity required). Key benefits: Solar attic fans can lower attic temperatures by 20–50°F, easing the load on your A/C.

What are the different types of solar attic fans?

Types of solar attic fans: Most residential solar attic fans are roof-mounted units – they resemble a low-profile dome or pyramid on your roof with a solar panel on top. There are also gable-mounted solar fans, which can attach behind an existing gable vent (with a separate solar panel that you mount on the roof nearby and wire to the fan).

How do I install a solar inverter in my attic?

This allows you to take advantage of cooling your attic during the coolest part of the day. Simply mount the fan to your gable vent using the adjustable mounting tabs, mount the solar panel on the side of your home or on the roof, and plug in the inverter to enjoy 24/7 cooling and ventilation in your attic.

Do Solar attic fans have a motor?

Despite differences, most solar attic fans share common traits: they mount on the roof with a flashing, have a solar panel (10W on the very small end up to \sim 50-60W on larger units) and a DC fan motor.

Should I install an airtight attic floor & solar fan?

An airtight attic floor + solar fan is an awesome combo for efficiency; a leaky attic floor + fan could have mixed results. So, don't skip the prep work: seal, insulate, then ventilate. • Using Existing Vent vs. Cutting a New Hole: How you physically install the fan depends on your roof's situation.

Are solar attic fans worth it?

Your attic can reach temperatures of up to 150°F which can destroy the integrity of your home as well as completely destroy your roof because of the humidity and moisture build up. Because of this, solar attic fans can prolong the life of your roof structure and air conditioning while helping you save up to 30% on A/C costs.
