

Australia News Solar Power Generation for Home Use

Overview

Australia's solar energy contribution has surged to nearly 20% in 2025, fueled by over 4 million rooftop systems and large-scale solar farms. With strong state support and global leadership in per-capita solar adoption, the country is on track to meet its 2030 clean energy targets. What percentage of Australia's electricity is generated by rooftop solar?

Rooftop solar generates over 10 per cent of Australia's electricity. Households and businesses are playing a leading role in Australia's renewable energy transition. Rooftop solar now accounts for 11.2 per cent of Australia's electricity supply, according to the Clean Energy Council's new Rooftop Solar and Storage Report, published today.

Are solar panels a standard part of new homes in Australia?

Solar panels are a standard part of new home builds in many parts of Australia. (ABC News: Briana Shepherd) In short: The capacity of rooftop solar will soon exceed that of coal, gas and hydro combined in Australia's main grid, a green energy report finds.

Will Australia's rooftop solar capacity exceed coal & gas?

(ABC News: Briana Shepherd) In short: The capacity of rooftop solar will soon exceed that of coal, gas and hydro combined in Australia's main grid, a green energy report finds. There is already almost 20GW of rooftop solar in Australia, but this is forecast to more than triple in coming decades.

Are solar and wind a good investment in Australia?

In Australia, 99% of new generation capacity installed since 2015 has been solar and wind and it is all private money. The energy market is saying very clearly that solar and wind have won the energy race and energy policies are consistent with reaching the government target of 82% renewable electricity by 2030.

How much solar power does Australia generate a year?

Since 2015, solar and wind generation has quadrupled. Wind and solar contributed just 7% of electricity (18 TWh) at the time of the Paris Agreement, while by 2023, their share had risen to 28% (77TWh), placing Australia as the ninth-highest country globally for combined solar and wind power in terms of absolute generation.

How many rooftop solar systems are installed in Australia in 2023?

The report, developed with data provided by solar consultancy SunWiz, has also found that rooftop solar photovoltaic (PV) system installations reached 20 GW of total capacity across Australia in 2023. New South Wales broke the record for the highest annual installed capacity of any state, with 970 MW of new rooftop solar systems.
