

# BESS price for photovoltaic greenhouses in Morocco

#### **Overview**

What are Morocco's Bess projects?

Morocco's 1.6 GW BESS projects represent a key step in its clean energy ambitions. The facilities will electrify key urban areas and firm up the grid. Although the initial focus is in the northwest, the government aims nationwide. Furthermore, the projects align with Morocco's ambitions to generate 52% of its electricity from renewables by 2030.

Will Morocco's 1.6 GW Bess projects be a model for future projects?

Morocco's 1.6 GW BESS projects demonstrate the country's resolve to be at the forefront of clean energy. As planning continues, hopes are high for timely implementation and long-term impact. The success of these initiatives is expected to serve as a model for future projects across the region.

Where will ONEE's Bess plants be built?

The BESS facilities will be constructed in Northwest Morocco, supplying electricity to Kenitra and the surrounding areas. However, despite the urgency and scale, ONEE has not yet appointed a transaction adviser to assist with the process. This is ONEE's first attempt at securing BESS plants independently.
