

BESS the Netherlands emergency outdoor communication power supply

Application scenarios of energy storage battery products

Overview

What is Bess in the Netherlands?

BESS in the Netherlands is a new and small but increasingly necessary industry. A striking growth in battery capacity began in 2021 when the total installed capacity rose by 65% compared to the previous year. This number doubled in 2022 and then tripled in 2023, reaching 621 MWh.

How does a Bess system work?

BESS systems store energy generated from renewable sources like solar and wind, releasing it during periods of high demand or when production dips. Thereby they ensure a steady and reliable energy supply.

What is a battery energy storage system (BESS)?

RWE has officially commissioned its first large-scale Battery Energy Storage System (BESS) in the Netherlands at the Eemshaven power station. With a total capacity of 35 megawatts (MW) and a storage capacity of 41 megawatt hours (MWh), the system will be crucial in balancing the power supply and demand within the Dutch electricity grid.

How many MWh can a Bess battery store?

The sophisticated BESS consists of 144 cutting-edge lithium-ion sealed cells -known as Fluence cubes - boasting a formidable capacity of 90MWh. In relative terms, this battery can store power sufficient to fulfill the energy demand of approximately 21,500 homes each day.

What is the largest Bess system in the Netherlands?

The largest operational BESS in the country today is a 30MW/68MWh system owned by developer-operator SemperPower, commissioned in late 2023. Note Fluence is also deploying a 35MW/100MWh BESS in the Netherlands for another utility Engie at a PV plant.

Where is Bess located?

This groundbreaking 45MW/ 90MWh utility-scale BESS will be located in the port area of Dordrecht, on a 6000m² site and will be used for grid stabilization by storing excess energy from renewable sources. Eneco wi.
