

Base station waterproof distribution box requirements

Overview

outdoor junction box should be made of high-quality cold-rolled steel plate, and the thickness of the iron plate of weather proof box should be greater than 1.5mm; the electrical appliances in outdoor weatherproof box should first be installed on a metal or non-wooden insulated electrical appliance mounting plate, and then fastened as a whole in outdoor electrical junction box; the metal plate should be electrically connected to waterproof electrical junction box. What makes up a distribution box?

Before installation, it's important to know what makes up a distribution box. Let's break it down into two main parts: the outer shell and the electrical parts inside. The enclosure protects the electrical components from water, dust, and damage. When choosing one, check the IP or NEMA rating.

How do I choose a distribution box?

First, think about the type of environment. Residential distribution boxes are usually smaller and built for lighter loads. They're great for homes and small offices. On the other hand, industrial boxes are designed for high-capacity use in places like factories, warehouses, or construction sites. Also, decide between indoor and outdoor use.

How high should a box be installed?

Avoid areas near water or places that are hard to access. The box should be safe from heat, moisture, and physical damage. This helps prevent electrical problems and makes maintenance easier. In homes, the best height for installation is about 1.5 meters from the floor — it's easy to reach and out of children's reach.

How do I know if my distribution box is safe?

After installing your distribution box, it's important to check everything before turning on the power. This helps keep the system safe and running smoothly. Start with a visual check. Make sure all wires are secure, insulated, and there's no visible damage. Look for loose connections or anything that doesn't

Why do some boxes have DIN rails?

Some boxes also include DIN rails for mounting extra devices and cable entry points to keep wires neat. These extras help make the box easier to install and maintain.

How high should a air conditioning box be?

In homes, the best height for installation is about 1.5 meters from the floor — it's easy to reach and out of children's reach. In industrial settings, you may need to adjust the height depending on the space and equipment around it. Leave enough space around the box for air to flow and for future check-ups.
