

# **Battery Module Costs and Photovoltaic Power Plants**

#### **Overview**

What is solar PV battery storage?

Solar batteries store the surplus energy produced during daylight for use during periods without sunlight (e.g. at night, during power outages). Considering the cost implications of your solar panel system means understanding the role and value of solar PV battery storage.

What are the cost implications of a solar panel system?

Considering the cost implications of your solar panel system means understanding the role and value of solar PV battery storage. Capacity and Power: These two variables represent a solar battery's capability to store energy (capacity) and deliver that energy to the home or business (power).

How does battery capacity affect solar PV battery storage costs?

The battery's capacity directly influences solar PV battery storage costs. It's the total amount of electricity that a solar battery can store. A battery with high capacity will require a substantial initial investment but it might be necessary depending on your energy requirements.

What tax credits are available for solar PV battery storage?

State and local government tax credits, and utility-sponsored programs can all chip away at the initial investment required for solar PV battery storage. For instance, the Federal Investment Tax Credit (ITC), can provide significant savings – dropping the net cost of a solar energy system by 26%.

Are photovoltaic power plants cheaper than coal?

The newest edition of the study by the Fraunhofer Institute for Solar Energy Systems ISE on the electricity generation costs of various power plants shows that photovoltaic systems now produce electricity much more cheaply than either coal or gas-fired power plants, even in combination with battery storage.

How much does a solar battery cost?

Historically, solar batteries have had a reputation for being prohibitively expensive, with many recorded instances where adding storage doubled the cost of a home solar installation. You can expect to pay between \$7,000 and \$18,000 for a solar battery.
