

Belarusian energy storage boom

Overview

Most energy in Belarus is cheap fossil gas from Russia, and Belarus is a net energy importer. According to IEA, the energy import vastly exceeded the energy production in 2015, describing Belarus as one of the world's least energy sufficient countries in the world. Belarus imports oil from Russia, and sends back some refined products such as gasoline. Total energy consumption (measure. Natural gasThe country is one of the world's largest importers of natural gas with estimates for 2018 being about 17 Mtoe (20 billion cubic metres [bcm]) of natural gas, making it the leading importer among the so-called EU4Energ.

Belarus is a large oil refiner, listed 36th in the world, at 19 Mt of oil products in 2018 by the IEA. It has two refineries and oil pipelines built during the Soviet era including the . Oil consum.

Because non-nuclear thermal power plants are ramped up and down depending on heat requirements, and nuclear is not very flexible, increased battery storage has been suggested.

Is Belarus a good energy source?

Most energy in Belarus is cheap fossil gas from Russia, and Belarus is a net energy importer. According to IEA, the energy import vastly exceeded the energy production in 2015, describing Belarus as one of the world's least energy sufficient countries in the world.

How much energy does Belarus use?

Primary energy use in Belarus was 327 TWh or 34 TWh per million persons in 2008. Primary energy use per capita in Belarus in 2009 (34 MWh) was slightly more than in Portugal (26 MWh) and about half of the use in Belgium (64 MWh) or Sweden (62 MWh). Electricity consumed in 2021 was 32.67 billion kWh, 3,547 kWh per capita.

How many oil refineries are in Belarus?

It has two refineries and oil pipelines built during the Soviet era including the Mozyr Oil Refinery. Oil consumed in 2021 amounted to 49.13m barrels with

12.52 m barrels produced, the rest imported. Renewable energy generation accounted for 6% of Belarus's energy in 2018, rising to 8% in 2020, mostly from biofuels and waste.

How many gas pipes are there in Belarus?

There are two large gas pipes running through Belarus, the Yamal-Europe pipeline and Northern Lights. In addition there is the Minsk-Kaliningrad Interconnection that connects to Kaliningrad. In 2021 18.64 billion m3 were consumed with 0.06 billion produced, the rest imported.

What percentage of Belarus's energy is renewable?

Renewable energy generation accounted for 6% of Belarus's energy in 2018, rising to 8% in 2020, mostly from biofuels and waste. Renewables share in electricity generation was 2% in 2018 (0.8 TWh). Renewable energy includes wind, solar, biomass and geothermal energy sources.

How much oil does Belarus use in 2021?

Oil consumed in 2021 amounted to 49.13m barrels with 12.52 m barrels produced, the rest imported. Renewable energy generation accounted for 6% of Belarus's energy in 2018, rising to 8% in 2020, mostly from biofuels and waste. Renewables share in electricity generation was 2% in 2018 (0.8 TWh).
