

Belgian solar power generation for home use new energy generation for home use

Overview

In 2017, nearly 63% of solar power installed in Belgium consisted of small systems under 10 kW, mostly residential rooftop solar PV. Larger systems over 250 kW accounted for almost 20% of the total. According to a report on behalf of the European Commission in 2015 Belgium Flanders had an estimated 1,301 MW (666 MW) of residential solar PV capacity with 336,000 (232,000) residenti.

Belgium will allow plug-in solar panels and batteries to connect to the grid starting May 2025, marking a major shift in energy use. This new rule will enable more households to easily integrate solar energy with mobile, plug-and-play devices.
