

# Belgium supporting wind power supply

#### **Overview**

The International Energy Agency (IEA) noted Belgium's significant offshore wind energy development, ranking it sixth globally in 2021. Anticipating the nuclear phase-out by 2025, Belgium introduced a EUR 1.2 billion plan to secure electricity and reduce emissions, focusing on expanding offshore wind and.

Wind power in Belgium has seen significant advancements, starting with the generation of electricity from farms in 2009. By 2020, the capacity of these offshore farms reached 2,262.

List of offshore wind farmsOverview of offshore sectorBelgium initiated its offshore wind energy sector in 2003 by planning the nation's first wind farm.

At the end of 2022 there were 672 operational onshore wind turbines with a combined capacity of 1748MW. The wind turbines are installed in small groups throughout the region, often along highways or canals and in industrial or agricultural areas.

In late September, the EU Commission approved a €682 million support scheme for the Belgian government to bolster offshore wind energy. This initiative is part of the EU's Temporary Crisis and Transition Framework (TCTF), designed to support key sectors in achieving net-zero emissions.
