

Benin Energy Storage Power

Overview

A West African nation where 40% of businesses still rely on diesel generators during daily power outages. Now imagine flipping that script with cutting-edge battery storage systems. That's exactly what Benin's 2025 commercial and industrial (C&I) energy storage initiative aims to achieve. Why is Benin reliant on electricity imports?

Benin is reliant on electricity imports for a significant share of its energy supply. Reform programmes, including plans for electrification, have been put in place in the country, where only 30% of the population had access to electricity in 2017.

How much energy does Benin consume?

Benin consumes 1.1 TWh of energy annually, with electricity accounting for only two percent of its net energy consumption. Thirty-two percent of Benin's population has access to electric power, and the country is reliant on biomass and imported petroleum products for 97 percent of its energy demand.

What is Power Africa's involvement in Benin?

Power Africa has supported the development of 127 megawatts (MW) of electricity generation projects in Benin*. In addition,* various firms have received U.S. Embassy support to move transactions forward. Power Africa's involvement in Benin is detailed in the page below, which gives an overview of the energy sector in Benin.

What are the different types of energy transformation in Benin?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Benin for 2022. Another important form of transformation is the generation of electricity.

What is happening in Benin in 2022?

No data for Benin for 2022. Another important form of transformation is the generation of electricity. Thermal power plants generate electricity by harnessing the heat of burning fuels or nuclear reactions – during which up to half of their energy content is lost.
