

# **Benin Hybrid Energy Storage Power Generation Project**

#### **Overview**

Is solar power a viable option for rural electrification in Benin?

Besides, current projects on off-grid rural electrification in Benin, specifically Solar Energy Promotion Project (PROVES) and Renewable Energy Development Program (PRODERE), are based on stand-alone solar PV/battery only. Such a combination makes the overall cost high due to a big battery storage required to ensure reliable power supply.

How can Benin increase local production?

However, the government of Benin is making serious efforts to increase local production through national projects, specifically the Solar Energy Promotion Project (PROVES) and the Renewable Energy Development Program (PRODERE). The principal RE sources in Benin are hydro energy, biomass energy, wind energy and solar energy.

Can a hybrid PV/DG/battery system power remote areas in Benin?

In summary, as solar radiation is an abundant resource across the country, this hybrid PV/DG/battery system can be a suitable model to power remote areas in Benin, and we recommend it for future electrification projects in the country in place of the current widely deployed PV/battery system. 1. Introduction.

Does Benin have a green energy policy?

To provide clean energy at a lower cost to their citizens, all nations of the world are striving to increase their energy production in an environmentally friendly way. Benin has also joined this dynamic by considerably increasing its green energy production efforts in recent years.

How can bioenergy contribute to the energy sector in Benin?

In addition, the Vossa hydroelectric power plant of 60.2 MW is to be built with an annual production capacity of 188.2 GWh. An additional hydroelectric plant

is planned to be installed in Bétérou to increase the national electricity production in Benin . Bioenergy can also play a crucial role in the energy sector in Benin.

Will Benin provide 100% electricity to its community by 2050?

Solar photovoltaic (PV) accounts for 0.30% of the mix by form of energy compared with 1.36% in 2016, as shown in Fig. 3. This shows that the government must make more effort to provide 100% electricity access to its community by 2050. Electricity mix of Benin from 2016 to 2020.

#### **Benin Hybrid Energy Storage Power Generation Project**

# Hybrids Combine Technologies to Enhance Electricity ...

Solar + wind, solar + storage, wind + storage--even fossil fuels combined with renewable energy--are supporting the growth of hybrid power ...

WhatsApp Chat

#### Renewable energy energy storage Benin

Researchers have studied the integration of renewable energy with ESSs [10], wind-solar hybrid power generation systems, wind-storage access power systems [11], and optical storage

#### WhatsApp Chat
