

## Cambodia Microgrid Energy Storage Power Generation System

### **Overview**

Thanks to this mesh system, almost all the households in Steung Chrov have their own solar and battery system that can power small appliances. Okra Solar's system uses the Okra Pod, a DC-to-DC controller system that converts the energy from the solar installations to a safer, lower voltage that is used to charge.

Okra Solar has developed a creative solution, where the excess power not used by one household can be shared with the rest of the community. Thanks to.

Okra Solar's mesh grids combine both physical hardware, including solar panels, battery storage, and existing and new transmission equipment with a software.

According to Okra Solar operations manager Otteh Edubio, a key benefit of their system is that the DC mesh grid "can be installed for a fraction of the cost of a.

Affordable, reliable access to sustainable energy—United Nations Sustainable Development Goal (SDG) 7—is critical for achieving many of the other SDGs.

The project, which aims to deliver clean and reliable power, will consist of a 1.25MWp ground-mounted solar PV plant and a 2MWh battery energy storage system integrated with diesel generators and a smart controller.
