

Cambodia energy storage photovoltaic costs

Overview

The cost of solar photovoltaic (PV) systems has dropped by over 80% in the last decade. In Cambodia, utility-scale solar can now be developed for under \$0.06/kWh, making it cheaper than diesel or coal. How much does solar energy cost in Cambodia?

One of the promising traits of solar energy in Cambodia is its cost. The average electricity price for solar power is around USD 0.03 per kW, significantly lower than that of coal, which is USD 7.7 per kW.

Does Cambodia have solar power?

However, considering the country's historical energy mix, the existing solar capacity appears positive. As of 2011, Cambodia had no solar power plants, and solar energy was not a part of the country's energy mix. Cambodia's current installed solar capacity is slightly over 400 MW, but the country is targeting 3.1 GW by 2040.

Why are Cambodians investing in solar energy?

Cambodian households and businesses are also increasingly investing in behind-the-meter (BTM) solar energy systems as they're much easier and faster to deploy and costs are lower than utility grid rates, market analysts highlight. Photovoltaic electricity potential in Cambodia. © 2017 The World Bank, Solar resource data: Solargis.

Will increasing solar power boost Cambodia's exports?

Aligned with achieving sustainable agriculture, energy and general improvement in livelihoods and living conditions, Cambodian Rice Federation (CRF) secretary-general Moul Sarith reportedly said that increasing solar power generation would help reduce electricity costs and boost the Kingdom's exports.

Does Cambodia have a solar generation regulation?

In 2018, Cambodia introduced a solar generation regulation, a new driver for the country's solar PV system development. Cambodia's grid-scale solar development started with just a 10 MW pilot in 2017.

How many energy projects are coming to Cambodia?

The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces.
