

# Can Huawei be used to connect the inverter to the Barbados communication base station

### **Overview**

Can a Huawei smart PV inverter be networked with a third-party ESS?

Only one Huawei smart PV inverter can be networked with a third-party inverter. After Charge from AC is enabled for the inverter, the AC power from the third-party inverter is supplied to loads and the surplus power can be charged to the ESS through the Huawei inverter. In this case, the ESS can work in maximum self-consumption or TOU mode.

How to add meter 2 through smart dongle in Huawei inverter?

When a third-party inverter is connected to meter 2 and the quick deployment is complete, add meter 2 through the Smart Dongle by referring to Adding a Power Meter Through Smart Dongle in 6.3.1. When charging from grid is enabled on a third-party inverter, it can supply power to loads and charge batteries through the Huawei inverter.

Can Huawei inverter charge batteries?

When charging from grid is enabled on a third-party inverter, it can supply power to loads and charge batteries through the Huawei inverter. In this case, the batteries can work in maximum self-consumption and TOU modes. If a Smart Dongle is replaced, add meter 2 through the Smart Dongle after quick deployment.

How to connect Huawei smart PV inverter to third-party production meter?

After configuring quick settings, choose Device Management, tap + to add the meter to the device list, and set the meter type to Third-party production meter. Only one Huawei smart PV inverter can be networked with a third-party inverter.

How many inverters can a smart dongle support?

Via 4G connection, Smart Dongle supports up to 10 inverters to communicate with the solar management system through hassle-free plug and play. Once

plugged in, the WLAN access point can be used for local deployment to realize intelligent power management and plant maintenance.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.
