

# Can a 72v inverter be connected to a 60v

#### **Overview**

#### Do I need a 12V inverter?

To do this, you need to connect an inverter to the battery bank. It is important to match the battery bank voltage with an inverter that can handle that same voltage. Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power.

#### Do I need a 60Hz inverter?

Here in the US, things run at 60Hz, in Europe and most other places around the world, things run at 50Hz. You'll most likely require a 60Hz inverter if you are running a device intended to run on US power. We like to go camping and travel quite frequently.

#### Can a 72V motor work with a higher voltage?

The motor will also still work with higher voltage, but will need to reduce the current in line with the rated power to not cause it to over heat. Limit to 24A ideally to be safe. Fully charged 72V is actually higher than 72V.

#### Is 72V a high voltage controller?

Fully charged 72V is actually higher than 72V. I tried overvolting by about 10V on a hub motor a few years ago and it lasted for a couple short rides before the familiar smell of fried electronics from the controller indicated its demise. But those two rides with more power convinced me to go for a higher voltage controller.

#### Are battery and controller compatible at 72V?

If you have to ask yes Battery and controller should be compatible at 72v even your motor is 60v. Heat will occur on uphills so dont try to climb with these setup. 151K subscribers in the ebikes community.

#### Can a 48V controller handle a 52v motor?

It really depends on the controller most can go over Volts by some amount like some 48v controllers can handle 52v no problem, it really depends If you have to ask yes Battery and controller should be compatible at 72v even your motor is 60v. Heat will occur on uphills so dont try to climb with these setup.

#### Can a 72v inverter be connected to a 60v

### Can I Use A 72V Battery On A 60V Motor?

Technically, yes - you can use a 72V battery on a 60V motor, but it's not recommended. The reason is that incompatible motor operating ...
