

Can energy storage equipment be installed indoors

Overview

Can energy storage systems be installed outside?

Certain types of energy storage systems have the potential to discharge toxic gas during charging, discharging, and normal use. It makes sense that these types of energy storage systems are only permitted to be installed outdoors. One last location requirement has to do with vehicle impact.

What is an energy storage system?

An energy storage system is something that can store energy so that it can be used later as electrical energy. The most popular type of ESS is a battery system and the most common battery system is lithium-ion battery.

How many kilowatt-hours can a solar system store?

Systems in these locations are also limited to 40 kilowatt-hours (kWh) of storage capacity. In all other locations noted above, the size limit is 80 kWh. On the exterior walls of the home, it's important to note that systems cannot go within 3 feet of doors or windows leading directly into the home.

Can ESS be installed in an attached garage?

And as we will soon discuss, code compliance for ESS in an attached garage can be much more complicated than systems in a detached garage. The California State Fire Marshal has stated in an information bulletin that the locations can be combined for a cumulative total of 280 kWh of ESS capacity.
