

# Canada s energy storage capacity

### **Overview**

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. Canada had 138MW of capacity in 2022 and this is expected to rise to 296MW by 2030. How much energy storage does Canada need?

Canada's current installed capacity of energy storage is approximately 1 GW. Per Energy Storage Canada's 2022 report, Energy Storage: A Key Net Zero Pathway in Canada, Canada is going to need at least 8 – 12 GW to ensure the country reaches its 2035 goals.

How big is Canada's energy storage capacity?

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. Canada had 138MW of capacity in 2022 and this is expected to rise to 296MW by 2030. Listed below are the five largest energy storage projects by capacity in Canada, according to GlobalData's power database.

What is Canada's solar energy capacity?

Canada's total wind, solar and storage installed capacity is now more than 24 GW, including over 18 GW of wind, more than 4 GW of utility-scale solar, 1+ GW on-site solar, and 330 MW of energy storage. Canada's solar energy capacity (utility-scale and onsite) grew 92% in the past 5 years (2019-2024).

What types of energy storage are available in Canada?

There are three main types of energy storage currently commercially available in Canada: Storage is playing an increasingly important role in the electricity system by improving grid reliability and power quality, and by complementing variable renewable energy sources (VRES) like wind and solar.

Why is energy storage important in Canada?

A consistent supply of energy storage components will allow Canada to

confidently promote its products, technologies, and services in global markets. This, in turn, provides continuity for international investors while also offering certainty to those looking to develop energy storage projects within Canada.

Is energy storage on the rise in Canada?

With a 68% increase in energy storage worldwide in 2022 and additional market commitments bringing the expected global installations to 130GW by 2023, its unsurprising awareness of the technology is on the rise. Some technologies, like pumped hydro, have a long history in Canada.
