

# Canadian solar power generation is placed on the surface

### **Overview**

Historically, the main applications of solar energy technologies in Canada have been non-electric system applications for , water heating and drying crops and lumber. In 2001, there were more than 12,000 residential systems and 300 commercial/ industrial solar hot water systems in use. These systems presently comprise a small fraction of C.

Does Canada have solar power?

Canada may seem to some as a fairly cold land that is not particularly suitable for solar power generation, but the country actually has substantial solar energy resources, due mostly to its large area.

How many solar projects are there in Canada?

Today, Canada is home to 196 major solar energy projects, the largest of which are found in Alberta and Ontario. Additionally, more than 43,000 solar (PV) energy installations are found on residential, commercial and industrial rooftops across the country, providing power directly to those homes and businesses.

How much solar energy will Canada generate by 2040?

Despite this, the Canadian Energy Regulator previously anticipated that solar would form 3 percent of the country's overall energy generation by 2040. In fact, according to statistics released this year by the Canadian Renewable Energy Association (CanREA), Canada's solar sector surpassed that figure in December 2020.

Where is the best place to produce solar energy in Canada?

The best place in Canada for producing solar power is Torquay, Saskatchewan (which has a solar energy potential of 1384 kWh/kW/yr), while the worst place is at the small research base located in Eureka, Nunavut (780 kWh/kW/yr). The best month for producing solar energy in Canada is April when days are midlength and skies are clear.

Can solar power help Canada's electricity grid?

With the continued expansion of new projects across the country, solar power is poised to contribute even more to Canada's electricity grid -- 82 per cent of which currently comes from sources such as hydro and nuclear. Today, Canada is home to 196 major solar energy projects, the largest of which are found in Alberta and Ontario.

How much solar power does Canada have in 2021?

Canada had 4,554 megawatts (MW) of solar power capacity in 2021, which is eight times more than it did in 2011 #2. Canada was capable of generating 4.8 Terawatt-hours (TWh) of electricity from solar in 2021, which is 19 times more than it did in 2011 #3. Canada is home to 196 major solar power projects across the country #4.
