

Central Asia Small Communication Base Station Inverter Grid Connection

Overview

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

What is a sub-array in a grid connected PV system?

sum of short circuit currents of all the strings in the array. - In a large grid connected PV system the array could consist of a number of sub-arrays. A sub-array comprises a number of parallel strings of PV modules. The sub-array is installed in parallel with other sub-arrays to form the full array.

Where should an inverter be connected?

The inverter should be connected directly to the main switchboard via a main switch. Where this is not possible or not desirable, the inverter energy system should be connected to the distribution board located physically nearest to the inverter, and the main switchboard.
