

# Chemical Energy Storage Power Station in Portugal

#### **Overview**

What is the energy storage capacity in Portugal?

Energy storage installed capacity in Portugal is still predominantly based on hydropower pumping, which is today over 3 GW, and will increase to 4,164 GW when the Alto- Tâmega dam is completed this year. However, this paradigm is about to shift with the democratization of energy storage solutions with wind and solar production.

Why is storage important for the energy transition in Portugal?

With 21 318 GWh of electricity generated in Portugal between January and June 2022 - 57% of which of renewable origin - storage will be decisive for the much-desired energy transition for two major reasons. On one hand, storage will offset the intermittent generation of renewable energy.

How many GWh of electricity are generated in Portugal in 2023?

Between 1 January and 31 October 2023, 35,152 GWh of electricity were generated on the Portuguese mainland, of which 67.8 per cent came from renewable sources. The storage will be decisive for the long-awaited energy transition.

How many kilotons of synthetic fuel will Portugal produce?

Portugal is developing projects to produce between 100 and 150 kilotons of synthetic fuels, mainly for aviation, although there is no national target yet. Key projects include a 20- to 50-kiloton e-fuel facility in Porto and an 80-kiloton plant in Figueira da Foz.
