

China and Africa sell lithium battery packs

Overview

Where are lithium batteries made in China?

The main cities include Shenzhen, Zhongshan, and Dongguan – all of which make up the world’s largest electronics manufacturing cluster. The easiest way to get there is by first flying to Hong Kong, and then cross the border into Shenzhen. Most lithium battery suppliers are based in southern China, close to Hong Kong S.A.R. Listed Companies.

Can China buy lithium from Australia?

Lithium is not so rare that China has to buy from Australia and deal with local companies. Countries like Chile, Argentina and the US have produced lithium for years – mostly from brines. Rio Tinto has unearthed a major deposit in Serbia and plans to turn it into a massive mine to produce product for the huge European market.

Should Africa develop a lithium-ion battery plant?

Naicker says it is important to develop a local lithium-ion battery plant, as all lithium-ion batteries used in Africa are currently imported from mega-factories in the northern hemisphere. In fact, he believes there is an “arms-like race” to establish battery production in the northern hemisphere, but with no plans to do the same in Africa.

How much lithium is mined in China?

China domestically produced approximately 18% (33,000 short tons) of the world’s mined lithium in 2023, and Chinese companies control 25% of the world’s lithium mining capacity.
