

Collaborative research and development of gravity energy storage projects

Overview

Is gravity energy storage a new energy storage technology?

Abstract: With the grid-connected ratio of renewable energy growing up, the development of energy storage technology has received widespread attention. Gravity energy storage, as one of the new physical energy storage technologies, has outstanding strengths in environmental protection and economy.

Does gravity energy storage technology have a domain knowledge map?

Based on the literature data, by utilizing bibliometric and social network analysis approaches, this research performed a bibliometric network analysis and generated a domain knowledge map in order to elucidate the status, progress, and trends of research and application, of gravity energy storage technology.

When was gravity energy storage invented?

The first patent application for gravity energy storage technology was filed by Tah Sun Lin in the USA in 1974, providing a device for harnessing wave energy and storing the energy in the form of potential energy for subsequent use in driving various machines.

Does gravity energy storage technology need technological breakthroughs?

The results of paper analysis show that the global output of gravity energy storage technology patents and papers continues to grow steadily, which is at the initial stage of commercialization, still needs technological breakthroughs.

Which country is the target market for gravity energy storage technology?

The figure clearly illustrates, China is the most important target market for gravity energy storage technology, accounting for 60% of the total number of the global gravity energy storage technology patents. This is followed by the USA, Japan, Korea and Germany. Fig. 2. The literature number of main

countries and regions related to GES technology.

How can gravity energy storage help a wind power generation system?

By integrating gravity energy storage technology, the wind power generation system can work in a wider wind speed range, or it can be stored when the wind is sufficient or the electricity is low, to ensure a stable power supply.
