

Commercial flywheel energy storage

Overview

Compared with other ways to store electricity, FES systems have long lifetimes (lasting decades with little or no maintenance; full-cycle lifetimes quoted for flywheels range from in excess of 10, up to 10, cycles of use), high ($100-130~W\cdot h/kg$, or 360-500~kJ/kg), and large maximum power output. The (ratio of energy out per energy in) of flywheels, also known as round-trip efficiency, can be as high as 90%. Typical capacities range from 3 to 1.

Commercial flywheel energy storage

Flywheel Energy Storage for Grid and Industrial Applications with ...

Our flywheel energy storage device is built to meet the needs of utility grid operators and C& I buildings. Nova Spin, our flywheel battery, stores energy kinetically. In doing so, it avoids ...

OverviewPhysical characteristicsMain componentsApplicationsComparison to electric batteriesSee alsoFurther readingExternal links

Compared with other ways to store electricity,

FES systems have long lifetimes (lasting decades with little or no maintenance; full-cycle lifetimes quoted for flywheels range from in excess of 10, up to 10, cycles of use), high specific energy (100-130 W·h/kg, or 360-500 kJ/kg), and large maximum power output. The energy efficiency (ratio of energy out per energy in) of flywheels, also known as round-trip efficiency, can be as high as 90%. Typical capacities range from 3 kWh to 1...
