

Construction of a large-scale energy storage project in Estonia

Highvoltage Battery

Overview

The construction of Estonia's first pumped hydro energy storage plant in Paldiski will begin in Q2 of 2025, representing a significant milestone in developing the country's inaugural large-scale energy storage facility. Where is Estonia's largest battery storage facility located?

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid. Estonian state-owned energy company Eesti Energia has inaugurated the nation's largest battery energy storage facility at the Auvere industrial complex in Ida-Viru County.

Will energiasaly build a large-scale pumped-hydro energy storage project in Estonia?

Energiasalv gets the go-ahead for constructing a large-scale pumped-hydro energy storage project in Estonia, Zero Terrain. Sustainability-focused energy storage project operator, Energiasalv, has received an official permit to continue with the construction of a 550-megawatt underground pumped-hydro energy storage facility in Paldiski, Estonia.

What is the Estonian pumped-hydro energy storage project?

The Estonian Pumped-Hydro Energy Storage project is expected to provide 6 gigawatt-hours of storage capacity for renewables following a single operating cycle of 12 hours. Energy will be generated by pumping water into Paldiski Bay from underground reservoirs.

Why is energy storage important for Estonia?

Energy storage is also critical for the ability of Estonia to achieve zeroemission levels for electricity generation by 2030.

How has Lithuania made a decisive move toward energy security for Estonia?

Lithuania has made a decisive move toward energy security for Estonia with

the beginning of construction of what will be the biggest battery park in the European mainland.

How has the transition to a 15-minute balancing period impacted Estonia's energy storage?

State-owned energy company Eesti Energi management board member Kristjan Kuhi recently highlighted to Energy-Storage.news Premium that the transition to a 15-minute balancing period and the desynchronisation of the Baltic electricity system from the Russian grid have spurred growth in Estonia's energy storage sector.
