

Containerized Lithium Iron Phosphate

Overview

How is lithium iron phosphate made?

Lithium iron phosphate is made with a solution of ferrous ions, lithium ions, and a phosphate-radical source solution. The components are dissolved in a chemical compound and mixed at 90°C to 180°C to form lithium iron phosphate. This compound is inserted into the batteries' cathode end.

What is a Narada NEPs LFP high capacity lithium iron phosphate battery?

The Narada NESP Series LFP High Capacity Lithium Iron Phosphate batteries are designed for a broad range of BESS solutions providing a wide operating temperature range, while delivering exceptional warranty, safety, and life. Whether used in cabinet, container or building applications, NESP Series batteries will meet any ESS need.

What is a LiFePO4 battery?

The LiFePO4 Battery cell, the basic unit of lithium iron phosphate battery, consists of positive, negative electrodes and electrolyte, with rated voltage of 3.2V and rated capacity of 280Ah. Narada adopts advanced LFP chemistry batteries, enjoying low cost, high efficiency and reliability as well as industry-leading safety technology.
