

## Continued expansion of solar panel

#### **Overview**

Recent market analyses reveal that solar installations have doubled every two years since 2020, with latest trends in solar PV indicating accelerated adoption across residential, commercial, and utility sectors. How did community solar installations perform in 2024?

Community solar installations increased by 35% year-over-year in 2024, resulting in 1,745 MWdc of new capacity and a record-breaking year for the segment. Installed capacity in New York and Maine drove this impressive growth, with Q4 2024 volumes greatly exceeding previous expectations.

How did community solar capacity increase in 2024?

Annual community solar capacity additions in 2024 surpassed a record-breaking 1.7 GWdc Community solar installations increased by 35% year-over-year in 2024, resulting in 1,745 MWdc of new capacity and a record-breaking year for the segment.

Why are we expecting a contraction in solar capacity this year?

For the community solar segment, higher levels of penetration in mature state markets and a slow ramp-up of capacity in emerging markets due to interconnection challenges are leading to our expectations of a contraction this year. For utility-scale, more than half of the estimated capacity for the year is currently under construction.

How much solar power will the electric power sector add in 2025?

We expect U.S. utilities and independent power producers will add 26 gigawatts (GW) of solar capacity to the U.S. electric power sector in 2025 and 22 GW in 2026. Last year, the electric power sector added a record 37 GW of solar power capacity to the electric power sector, almost double 2023 solar capacity additions.

How many GWDC did the US solar industry install in 2024?

The US solar industry installed nearly 50 (49.99) GWdc of capacity in 2024, a remarkable 21% increase from 2023. The industry continued breaking records and experiencing unprecedented growth, accounting for 66% of all new generating capacity added in 2024.

How are the proposed measures affecting the solar sector?

The proposed measures have varying degrees of impact on each solar segment. We have identified some initiatives that are contributing to a challenging environment for the sector: Energy emergency declaration. President Trump declared an energy emergency, prioritizing thermal and hydropower generation over wind, solar and storage.
