

Czech outdoor wind power base station environmentally friendly electricity

Overview

Why is wind power not being developed in the Czech Republic?

The development of wind power is being prevented primarily for economic and political reasons even though the potential for producing cheap, clean power from wind in the Czech Republic is enormous. We can look to Austria and Poland for examples.

How many wind turbines can we build in the Czech Republic?

For comparison, the output of all 200 wind power plants in the Czech Republic is just 352 megawatts. According to a study by David Hanslian of the Institute for Atmospheric Physics at the Academy of Sciences, we could build as many as 1,400 wind turbines with an installed output of 7,000 megawatts in the Czech Republic by the year 2040.

Where are wind power plants located in Austria?

As soon as the train leaves behind Břeclav and the floodplains and forests around the Dyje River, the view opens up to reveal a set of several dozen wind power turbines between the winemaking villages of Großkrut and Allichtenwarth in Austria. The Lower Austrian landscape is sprinkled with wind power plants from the Czech border to Vienna.

Why is Czech wind power lagging?

At first glance, the reason the development of Czech wind power is lagging might seem clear: Compared to Denmark, the Netherlands or Poland, we have no coast, nor do we have expansive enough lowlands with the appropriate constancy and force of wind flow to take advantage of wind turbines full-time.

How does wind power work in Austria?

The Lower Austrian landscape is sprinkled with wind power plants from the Czech border to Vienna. Hundreds of wind turbines transform the force of flowing air into electrical power supplying millions of businesses and

households — wind contributes 14 % of total electrical power production in Austria.

What is the rated capacity of a wind power plant?

The rated capacity around 4 MW is achieved when the wind speed is around 13 m/s, so called start-up wind speed is 3 m/s. The wind energy industry is really environmentally friendly. It does not produce solid or gas emissions or exhaust heat, there is no burden of waste storage, it does not need water for its operation.

Czech outdoor wind power base station environmentally friendly ele

Czechia launches call for construction of wind power ...

This call is specifically for the construction of wind power plants, offering up to 750 million Czech crowns (approximately 30 million euros) per ...

WhatsApp Chat

Impact of Wind Power Plants on the Electrical Power System of ...

Based on information on the operated wind power plants and the plants to be put into operation, three scenarios of possible future development of wind power plants in the Czech Republic ...
