What is the government's vision for power generation in Congo?

The government's vision is to increase the service level to 32 percent by 2030. Lack of access to modern electricity services impairs the health, education, and income-generating potential of millions of Congolese people. Most power generation development is directed and funded by mining companies seeking to power their facilities.

With an electrification rate of just 19%, DRC has the second-highest number of people globally — about 77 million — without access to electricity. Less than 2% of rural areas are electrified.
