#### **Overview**

### What is an EV charging pile?

An EV charger or charging pile is a unit intended for supplying electric energy to an electric vehicle that requires charging in order to increase its stored energy. They act as intermediaries between the power grid and an electric vehicle (EV), controlling the current and voltage supply to ensure that charging is done efficiently and safely.

Why is it important to maintain the charging pile?

The importance of maintaining charging piles lies in the fact that influences by the changeable environment and ageing inner parts can cause various faults. Regular examination and maintenance are necessary during both product storage and using processes.

What is a charging pile?

A charging pile is the basic component of an electric power infrastructure that allows electricity to flow to the vehicle. The charging station is a more generic word that can refer to one or more charging piles in a particular place, usually equipped with additional facilities such as parking lots, lighting, and payment terminals.

What is the difference between charging pile and charging station?

Although "charging pile" and "charging station" are occasionally used interchangeably, they describe different ideas. A charging pile is the basic component of an electric power infrastructure that allows electricity to flow to the vehicle.

Why do EV owners need a private charging pile?

The effectiveness of PV energy sources is also substantially grown because an abundant charging network encourages the application of clean energy in place for fossil fuels, contributing to lower carbon emissions around the world.

The installation of a private charging pile is economically beneficial to EV owners.

What is the protection level of indoor and outdoor charging piles?

Indoor charging piles should have a protection level of at least IP32 or above, while outdoor charging piles need to have a protection level of at least IP54 to ensure the safety of human bodies and charging equipment in harsh environments with wind, rain, and the need for better insulation and lightning protection.
