

# Double glass module voltage

# **Overview**

In systems with double-glass panels, the voltage can reach 1500 V (in traditional modules up to 1000 V). When choosing a greater working voltage for the solar panels, helps to lower the overall cost of the solar power plant (due to the cost of wires, grid inverter, etc.).

# **Double glass module voltage**

# Double-glass PV modules with silicone encapsulation

The concept enables safe module operation at a system voltage of 1,500V, as well as innovative, low-cost module mounting through pad bonding.
