

Energy Storage Battery Industry Ecosystem

Overview

Value chain depth and concentration of the battery industry vary by country (Exhibit 16). While China has many mature segments, cell suppliers are increasingly announcing capacity expansion in Europe, the United States, and other major markets, to be closer to car manufacturers. Partially because of.

Global demand for Li-ion batteries is expected to soar over the next decade, with the number of GWh required increasing from.

The global battery value chain, like others within industrial manufacturing, faces significant environmental, social, and governance (ESG).

The 2030 outlook for the battery value chain depends on three interdependent elements (Exhibit 12): 1. Supply-chain resilience. A resilient battery value chain is one that is regionalized and diversified. We envision that each region will cover over 90 percent of.

Some recent advances in battery technologies include increased cell energy density, new active material chemistries such as solid-state batteries, and cell and packaging.

Global grid storage capacity more than doubled in 2024 to 126 GW, with China, the U.S., and Europe leading growth. Batteries are shifting from niche technology to core infrastructure, underpinning the clean energy grid much like pipelines supported the fossil fuel era.
