

Energy Storage Battery Manufacturing Park

Overview

Where are LG batteries made?

The complex consists of two manufacturing facilities which are the company's first stand-alone cylindrical and ESS battery plants in North America. The cylindrical battery plant, called LG Energy Solution Arizona, will produce 46-Series batteries for electric vehicles (EV).

Is energy storage here to stay?

But now LGES sees more growth for ESS and already has four-times more ESS manufacturing capacity than last year, Park said. That's largely the main talking point for the industry: Regardless of the subsidies offered by the federal government, energy storage is here to stay.

How many GWh can a battery power plant produce a year?

When fully operational, the complex's average annual production capacity is expected to reach 53GWh (cylindrical batteries 36GWh, LFP ESS batteries 17GWh).

Is AESC retooling its EV battery manufacturing plant in Tennessee?

AESC has retooled its EV battery manufacturing plant in Tennessee to produce LFP cells for ESS (specifically Fluence), although the plant's annual production capacity has not been revealed (previously estimated at 3 GWh for EV).

Why should we build LFP batteries?

This allows us to integrate cutting-edge innovation while building expertise and retaining control that will lay the foundation for future battery manufacturing in the U.S. — allowing the U.S. to finally build LFP batteries at scale and pave the way to compete globally on energy storage production.

Why did ESS invest \$1.4 billion in EV battery manufacturing in 2022?

In 2022, the company announced a \$1.4 billion investment to start ESS battery manufacturing at an expansion on-site. The decision to support an ESS build-out over EV was wise as the EV market of today faces waning customer demand and lessened federal support.
