

## **Energy Storage Plan**

#### **Overview**

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

What is energy storage economics?

Source: EPRI. Understanding the components of energy storage systems is a critical first step to understanding energy storage economics. The economics of energy storage is reliant on the services and markets that exist on the electrical grid which energy storage can participate in.

What services can energy storage provide?

The figure below provides a list of the services that energy storage can provide at the distribution level (generally in the 10kW-10MW range). These include virtual distribution capacity, power quality support, resilience / backup power for microgrids, as well as the possibility to provide transmission support in certain scenarios.

What is new energy storage?

New energy storage refers to electricity storage processes that use electrochemical, compressed air, flywheel and supercapacitor systems, but not pumped hydro, which uses water stored behind dams to generate electricity when needed. Our Standards: The Thomson Reuters Trust Principles.

What is energy storage ES 101?

This content is intended to provide an introductory overview to the industry drivers of energy storage, energy storage technologies, economics, and

integration and deployment considerations. ES 101 may be helpful for bringing new stakeholders up to speed on the energy storage landscape.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

#### **Energy Storage Plan**

This document identifies energy storage as a key element of the decarbonisation of the sector and support energy security. It promotes the highquality and large-scale development of new ...
