

# **Energy Storage Power Station Project Procurement**

#### **Overview**

Why should we invest in a pumped storage power plant?

By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany. This investment is part of our previously announced strategy to invest in growth and transformation towards a greener business.

How many MW of energy storage will the US have in 2021?

As a result, the amount of storage installations in the United States is expected to increase from 4,631 MW in 2021 to more than 27,000 MW by 2031, and the US energy storage industry has laid out plans for 100,000+ MW of installed capacity by the end of 2030.

What is station use energy?

Station Use: "Station use" energy refers to energy that is required for the operation of an energy generation or storage resource in order for such resource to operate. For certain types of resources the station load can be significant.

How will a pumped storage power plant contribute to the energy transition?

The company is making a significant contribution to the energy transition and is continuing its corporate transformation towards more renewable energy generation. By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

#### What is a PPA for new energy storage resources?

Some PPAs for new energy storage resources have been structured as capacity-only contracts in which the developer is responsible for the sale of energy and all costs associated therewith—including the costs of the required energy procured from the utility.
