

Energy Storage Power Supply Construction Site

Overview

Can a battery energy storage system replace diesel-fuelled construction site equipment?

As a low carbon alternative, Battery Energy Storage System (BESS) has been viewed as a viable option to replace traditional diesel-fuelled construction site equipment. You can gain a better understanding and more knowledge on BESS adoption by our advisory services and General Guideline on BESS Adoption for Construction Sites (PDF).

Should a battery energy storage system be installed for customer self-use?

For Developers: For Contractors: If a Battery Energy Storage System (BESS) will be installed for customer self-use, it should be ensured the BESS does not have capability to export power to or back energize the distribution network connected in parallel with the main grid.

How much energy does an energy storage system produce?

The gross energy content spans from 40 kWh to 160 kWh, depending on the version, with peak outputs ranging from approx. 60 to 150 kVA. The energy storage system can supplement an insufficient grid connection or be used as an isolated grid - i.e. when no grid connection is available.

Energy Storage Power Supply Construction Site

Energy storage container, BESS container

Mobile power supply On the construction site, there is no grid power, and the mobile energy storage is used for power supply.
