

Energy Storage Project Layout Planning

Overview

How can energy storage products be integrated?

Integration of energy storage products begins at the cell level and manufacturers have adopted different approaches toward modular design of internal systems, all with the goal of improving manufacturing efficiencies, reducing maintenance time and improving operational reliability.

Do energy storage systems need to be listed?

It is critical for projects moving forward that execution teams understand that the International Fire Code (IFC), NFPA 855 and NFPA 70 (the National Electric Code) require energy storage systems to be listed, and that UL 9540 is the listing standard applicable.

What is a grid-scale battery energy storage system (BESS)?

Grid-scale battery energy storage system (BESS) installations have advanced significantly, incorporating technological improvements and design and packaging improvements to enhance energy density, safety and integration with renewable energy sources.

How do you calculate backup power & self-consumption?

For backup power, determine the critical loads that need to be supported and for how long during an outage. For maximising self-consumption, calculate the gap between renewable generation and demand, especially during evening or non-solar hours.
