

Energy Storage Project Safety Production Planning

Overview

What is an energy storage roadmap?

This roadmap provides necessary information to support owners, opera-tors, and developers of energy storage in proactively designing, building, operating, and maintaining these systems to minimize fire risk and ensure the safety of the public, operators, and environment.

Why is safety important for energy storage?

Safety is the highest priority for our industry—a commitment reflected by rigorous safety standards and partnerships with the fire service that guide planning, developing, and operating each energy storage project. Fire incidents at energy storage facilities are extremely rare and remain isolated.

Are energy storage facilities safe?

These established safety standards, like NFPA 855 and UL 9540, ensure that all aspects of an energy storage project are designed, built, and operated with safety as the highest priority. Energy storage facilities are monitored 24/7 by trained personnel prepared to maintain safety and respond to emergency events.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Why is the energy storage industry important?

The U.S. energy storage industry strives to not only meet but exceed the most rigorous safety codes and standards. Established standards ensure that energy storage facilities incorporate the most advanced safety features. The

industry promotes the adoption of these standards in communities across America.

Why do energy storage projects need a fire service?

The energy storage industry is committed to partnering with the fire service to promote safe and reliable operation. From the blueprint of a project site to the specially engineered battery containers, energy storage projects are inherently designed to perform safely and reliably on the grid.
