

Energy storage assists photovoltaic unit frequency regulation

Overview

Flywheel Energy Storage (FES) is used for short-duration frequency regulation due to its high power density and fast response time. Pumped Hydro Storage (PHS) is a mature technology that can provide both short-term and long-term frequency regulation. Can large-scale battery energy storage systems participate in system frequency regulation?

In the end, a control framework for large-scale battery energy storage systems jointly with thermal power units to participate in system frequency regulation is constructed, and the proposed frequency regulation strategy is studied and analyzed in the EPRI-36 node model.

Does battery energy storage participate in system frequency regulation?

Since the battery energy storage does not participate in the system frequency regulation directly, the task of frequency regulation of conventional thermal power units is aggravated, which weakens the ability of system frequency regulation.

Is there a fast frequency regulation strategy for battery energy storage?

The fuzzy theory approach was used to study the frequency regulation strategy of battery energy storage in the literature, and an economic efficiency model for frequency regulation of battery energy storage was also established. Literature proposes a method for fast frequency regulation of battery based on the amplitude phase-locked loop.

Can large-scale energy storage battery respond to the frequency change?

Aiming at the problems of low climbing rate and slow frequency response of thermal power units, this paper proposes a method and idea of using large-scale energy storage battery to respond to the frequency change of grid system and constructs a control strategy and scheme for energy storage to coordinate thermal power frequency regulation.

Are battery frequency regulation strategies effective?

The results of the study show that the proposed battery frequency regulation control strategies can quickly respond to system frequency changes at the beginning of grid system frequency fluctuations, which improves the stability of the new power system frequency including battery energy storage.

Why should energy storage equipment be integrated into the power grid?

With the gradual increase of energy storage equipment in the power grid, the situation of system frequency drop will become more and more serious. In this case, energy storage equipment integrated into the grid also needs to play the role of assisting conventional thermal power units to participate in the system frequency regulation.

Energy storage assists photovoltaic unit frequency regulation

Photovoltaic-storage coordinated support control technology ...

Based on this analysis, the paper evaluates the system's inertia and primary frequency regulation requirements to meet system frequency security constraints and ...
