

# Energy storage cabinet battery prices in 2024

### **Overview**

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

Will lithium-ion battery prices fall again in 2024?

Prices: Both lithium-ion battery pack and energy storage system prices are expected to fall again in 2024. Rapid growth of battery manufacturing has outpaced demand, which is leading to significant downward pricing pressure as battery makers try to recoup investment and reduce losses tied to underutilization of their plants.

What do we expect in the energy storage industry this year?

This report highlights the most noteworthy developments we expect in the energy storage industry this year. Prices: Both lithium-ion battery pack and energy storage system prices are expected to fall again in 2024.

How will battery overproduction and overcapacity affect the energy storage industry?

Photographer: Krisztian Bocsi/Bloomberg Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024, pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights the most noteworthy developments we expect in the energy storage industry this year.

How many gigawatts will stationary storage add in 2024?

Stationary storage additions should reach another record, at 57 gigawatts (136 gigawatt-hours) in 2024, up 40% relative to 2023 in gigawatt terms. We expect stationary storage project durations to grow as use-cases evolve to

deliver more energy, and more homes to add batteries to their new solar installations.

How many terawatt-hours of battery-cell manufacturing capacity are there in 2024?

BNEF estimates the 3.1 terawatt-hours of fully commissioned global battery-cell manufacturing capacity is more than 2.5 times the annual demand for lithium-ion batteries in 2024. While demand across all sectors saw year-on-year growth, the EV market – the biggest demand driver for batteries – grew more slowly than in recent years.
