

## **Energy storage cabinet protection level standard**

#### **Overview**

UL 9540 is a safety standard for the construction, manufacturing, performance testing and marking of grid-tied ESS. This includes electrochemical, chemical, mechanical, and thermal storage systems. It also covers systems operating in standalone mode. What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.

What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

Are battery energy storage systems safe?

As more battery energy storage systems (BESS) are connected to the grid, safety is paramount. That's why clear safety standards exist for the storage industry; protocols including UL 9540, UL 9540A, and NFPA 855 aim to quantify how well batteries stand up to worst-case situations.

What is a safety standard for stationary batteries?

Safety standard for stationary batteries for energy storage applications, nonchemistry specific and includes electrochemical capacitor systems or hybrid electrochemical capacitor and battery systems. Includes requirements for unique technologies such as flow batteries and sodium beta (i.e., sodium sulfur and sodium nickel chloride).

What is the maximum energy rating per ESS unit?

The maximum energy rating per ESS unit is 20 kWh. The maximum kWh capacity per location is also specified—80 kWh when located in garages, accessory structures, and outdoors and 40 kWh in utility closets or storage spaces. For storage capacities that exceed these limits, non-residential requirements come into play (NFPA 855 Chapters 4-9).

What does ul 9540 mean for energy storage systems & equipment?

The third edition of the UL 9540 Standard for Safety for Energy Storage Systems and Equipment, published in April 2023, introduces replacements, revisions and additions to the requirements for system deployment.

## **Energy storage cabinet protection level standard**

## What's New in UL 9540 Energy Storage Safety ...

UL 9540 is a safety standard for the construction, manufacturing, performance testing and marking of grid-tied ESS. This includes ...
