

Finnish thin-film photovoltaic module panels

Overview

Can flexible thin-film modules be used in floating PV installations?

Researchers from Michigan Technological University and Finland's Aalto University School of Electrical Engineering have come up with a series of design guidelines to build flexible thin-film modules for applications in floating PV installations that are in direct contact with the water.

What is a thin film module?

Thin film modules are designed to be high voltage and so are linked in parallel rather than in series in long strings. This means that if one module is shaded the rest of the system is not affected. Each module is therefore optimised.

What is the best substrate for thin-film panels?

Cadmium telluride is the most commonly used substrate in manufacturing thinfilm panels. In fact, it holds 50% of market share. These panels have an efficiency range between 9% and 11%, but some have seen up to 18.7% efficiency ratings.
