

Fire Fighting Photovoltaic Communication System Base Station

Overview

Can firefighters work near energized PV systems?

As PV deployments have become commonplace around the world, codes and standards bodies have worked with the fire services and the PV industry to develop guidelines to address the potential hazards to firefighters working near energized PV systems.

How can a PV system improve firefighters' safety?

As main activities to improve firefighters' safety, the German guidelines explain the importance of recognizing PV systems, installation methods of DC wires to lower electric shock risks for firefighters, and a specific firefighting operation flow for fires involving PV systems.

What is a solar photovoltaic firefighting strategy?

By JOSEPH C. CAMAROTA When responding to a structure, residential, or commercial fire that involves solar photovoltaic (PV) systems, you must implement a new firefighting strategy. No longer can the operating incident commander (IC) open the main electrical disconnect to a structure and feel comfortable that no energized power sources will remain.

When did fire safety standards for PV systems come into force?

The Tokyo Fire Department released "Directive standards for fire safety measurement regarding PV systems" to ensure the safety of firefighters in July 201424. The scope includes buildings requiring fire prevention such as commercial buildings and public buildings in Tokyo. It went into force on October 1, 2014.

Can a PV system be used near a fire?

The presence of a PV system near a fire may produce hazards such as heightened potential for falls, electrical shock, and collapse of roof structures. Due to these perceived hazards, there have been cases where firefighters

limited their operations and the fire was allowed to expand.

How should fire service personnel handle a PV system fire?

Operate normally, but do not deliberately touch PV hardware. Fire service personnel should follow their normal tactics and strategies at structure fires involving PV systems, but do so with awareness and understanding of possible exposure to energized electrical equipment. Size up, identify, and validate any hazards.
